The Search for Health Information

- Health is the second most popular subject of online searches
- 80% of online health inquiries start at a search engine
- Less than ¼ of searchers verify the date or information of the source
- More than ¼ of searchers hit a paywall
- 90% of adults have difficulty using the health information they encounter every day

Jennifer Aniston's New Diet Plan Will Shock And Inspire You

Health literacy is the degree to which individuals have the capacity to obtain, process, and understand basic health information and services needed to make appropriate health decisions.

-U.S. Department of Health and Human Services. 2000. Healthy People 2010. Washington, DC: U.S. Government Printing Office

Why people need health literacy

- Access health care services
- Analyze risks and benefits
- Calculate dosages
- Communicate with health care providers
- Evaluate information for credibility and quality
- Interpret test results
- Locate health information

Health literacy requires:

- Basic literacy
- Numeracy
- Biology
 - Watch: Health Literacy and Patient Safety by AMA Foundation on YouTube
- Cultural/linguistic competency
 - read: The Spirit Catches You and You Fall Down by Anne Fadiman

Why should libraries help?

- Libraries are (almost) universally supported
- Libraries are essential to community well-being
- Library systems reach 95% of the population
- Libraries already play a critical role in promoting child and adult literacy

Why should community stakeholders care?

- Healthier communities have:
 - higher rates of education
 - Stronger local economies
 - Recover from disasters more quickly
 - Fewer chronic diseases
 - Lower rates of chronic stress
 - Lower early death rates

Libraries are partners in a healthy community

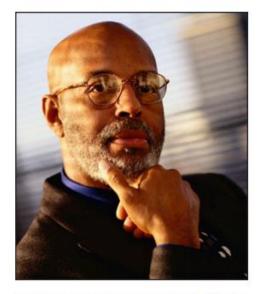

- Access to evidence based up to date health information
- Provide a safe environment to conduct health information services
- Provide health related programming and outreach

Chemotherapy

"As soon as I got past the shock of being told I had cancer, I wanted to learn more. I had so many questions about the kind of cancer I have and how it's treated. Now I've finished my first cycle of chemo, and I feel very hopeful."

Read this pamphlet to learn about chemotherapy.

Take it with you to your doctor's visit to fill in together. This will help you share what you learn with family and friends.

What is chemotherapy?

Chemotherapy is a cancer treatment that uses drugs to destroy cancer cells. It is also called "chemo."

Today, there are many different kinds of chemotherapy. So the way you feel during treatment may be very different from someone else.

Have all the blood tests your doctor orders. Blood tests help your doctor take care of your health.

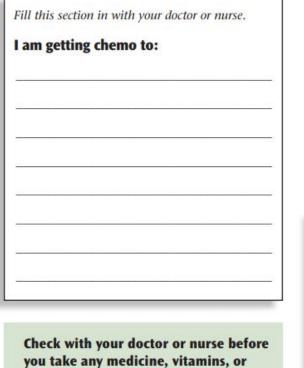

How can chemotherapy help me?

Chemotherapy can be used to:

- Destroy cancer cells
- · Stop cancer cells from spreading
- · Slow the growth of cancer cells

Chemotherapy can be given alone or with other treatments. It can help other treatments work better. For example, you may get chemotherapy before or after surgery or radiation therapy. Or you may get chemotherapy before a peripheral blood stem cell transplant.

herbs. Some of these can change the way chemotherapy works.

Chemotherapy can be given in these forms: An IV (intravenously)	
 A shot (injection) into a muscle or other p of your body 	ar
☐ A pill or a liquid that you swallow	
☐ A cream that is rubbed on your skin	
Other ways:	

			tor or nurse.
